Every "Z" Part Is Interchangeable

Precision methods of manufacture make corresponding "Z" Engine parts exactly alike—absolutely interchangeable—perfect fitting—undeviating.

Because similar "Z" Engine parts are as like as "two peas" they interchange perfectly—fit to a hair's breadth—always. This is the result of accurate, careful, machine work by expert engine builders.

The "Z" is equipped throughout with removable, die-cast bearings. All parts liable to wear are case hardened. Replacements due to breakage or long wear are easily made—easily fitted—perfectly interchangeable.

Benefit by the experience of more than a quarter-million farmer users—come in and see the "Z" today.

Other "Z" features are: Runs on kerosene, coal oil, tops, as well as gasoline; built-in high tension Bosch oscillating magnet; more than rated power; clean-cut, efficient design; long-lived endurance.

Perfection's Price In Tire Building

A tire-maker's first problem is to decide how much he can give for the money. This, and every other question in tire building, depends upon policies.

A super-tire, such as The Brunswick, can be made only by a concern which knows well and appreciates that there is nothing exclusive in the tire industry except high standards.

Since 1845 the House of Brunswick has held first place in every line it entered. Brunswick Tires, as more and more motorists come to know them, will certainly be awarded that coveted place held only by the superline.

Motorists who buy one Brunswick usually adopt it for complete equipment. Yet this is not strange, since the first one so completely proves its superiority.

If the name of Brunswick certifies to you, as to most men, an extraordinary tire, at no higher price, would it not be good business to test one or two Brunswick Tires?
